

Research Thesis

West African fabric patterns and their
adaptation to contemporary digital media

Rokhy NIANG

RESEARCH QUESTION

How can we translate West African fabric patterns into contemporary digital media without losing their meaning and history?

SUB-QUESTIONS

QUESTION 1

What patterns organize West African fabric designs, and how can we demonstrate that they convey meaning and are not merely decorative?

QUESTION 2

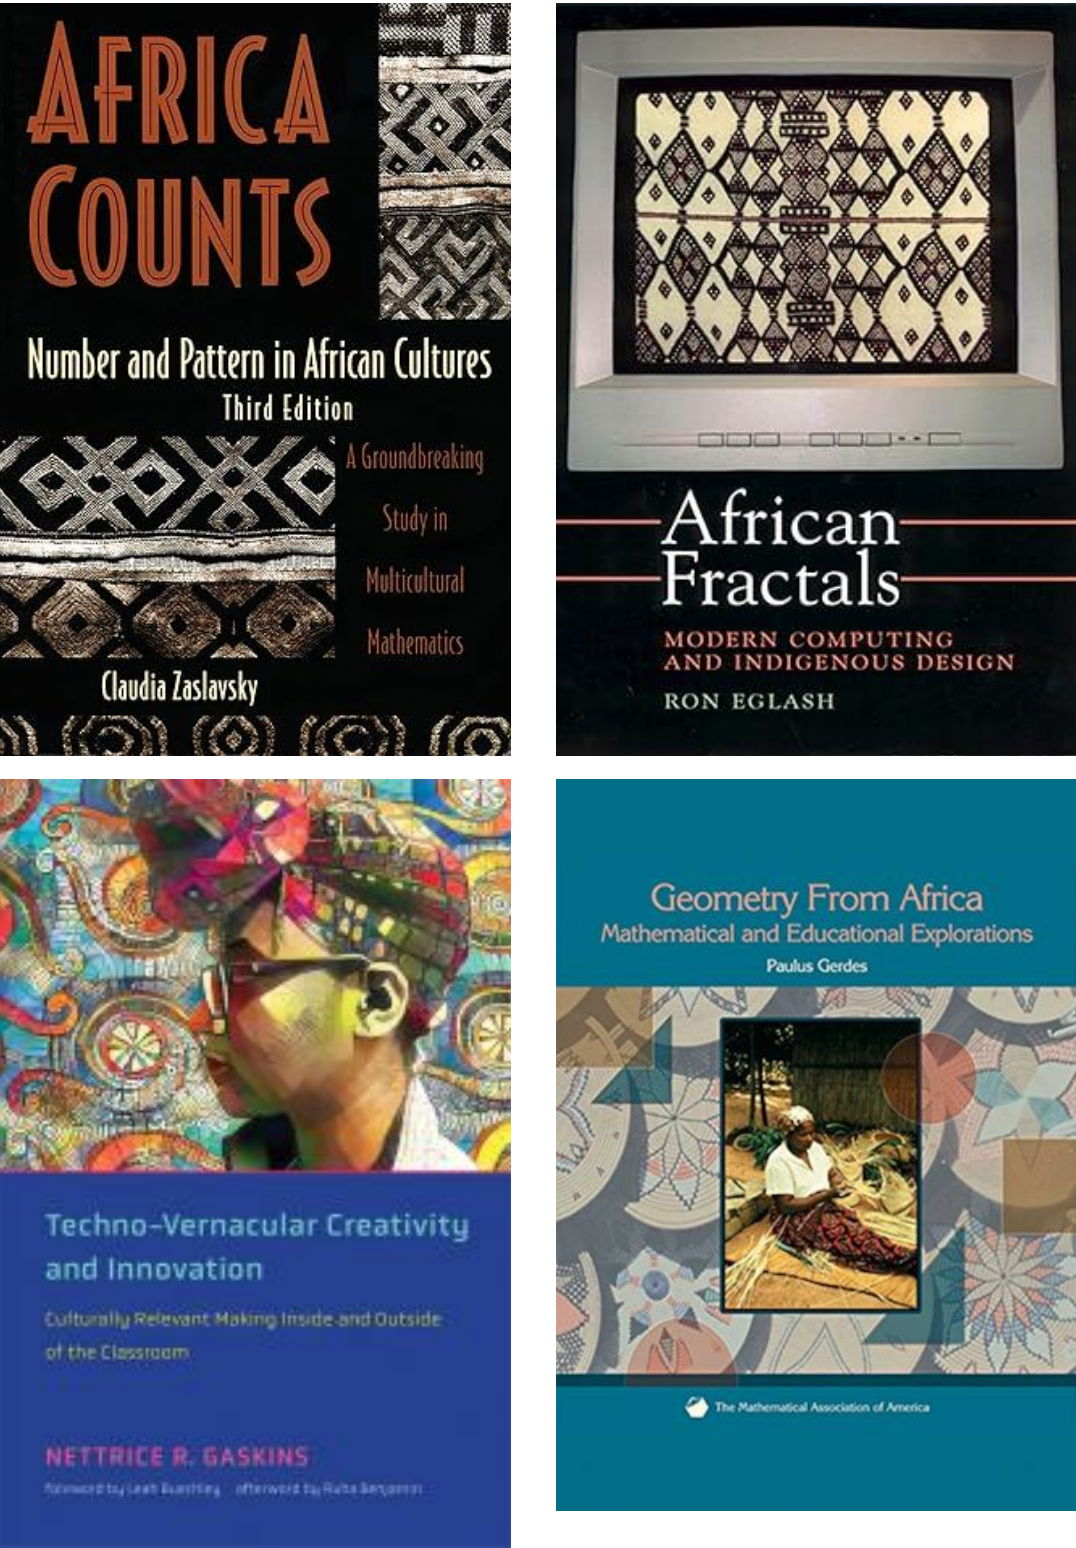

How can we translate the logic behind these patterns into contemporary digital systems while preserving their meaning?

QUESTION 3

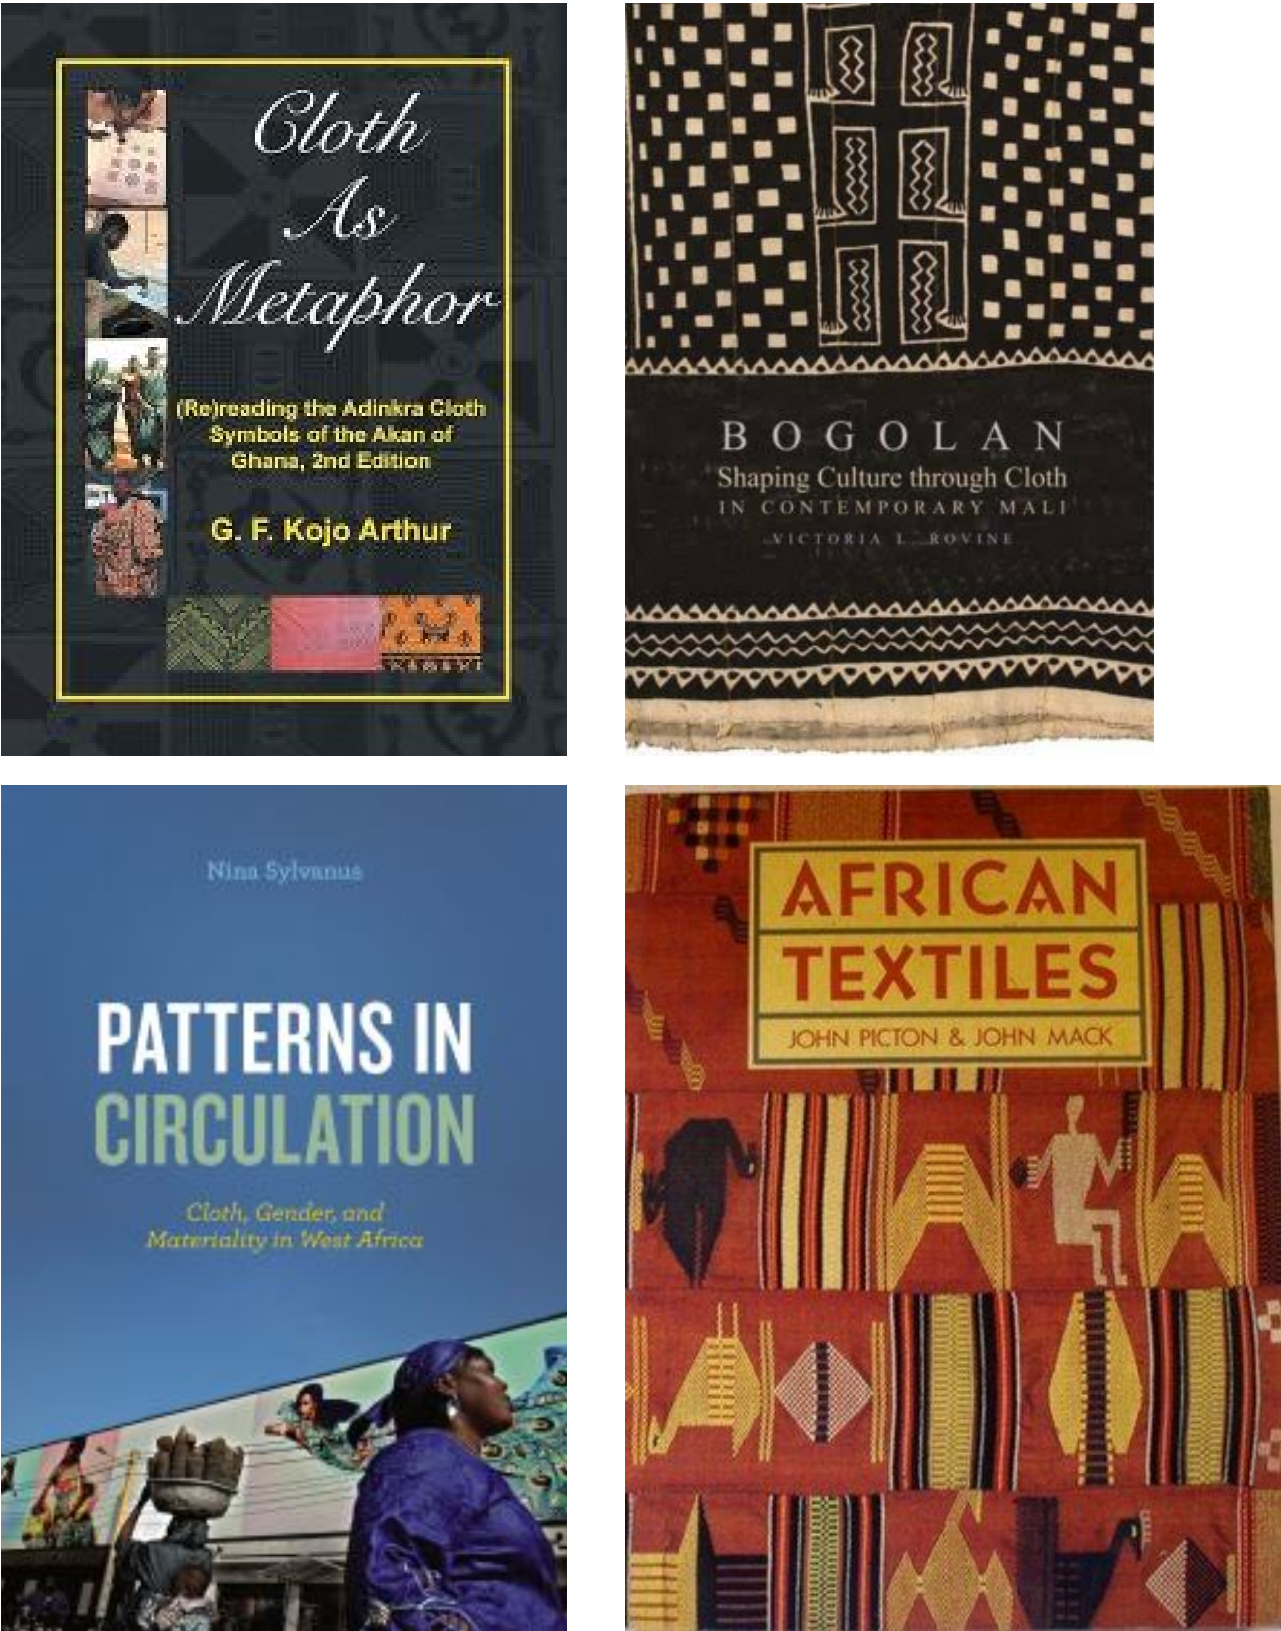

What is the designer's role in this process, and how can these patterns be passed on to a new generation while respecting their culture?

THEORETICAL REFERENCES

TEXTILE AND PATTERN REFERENCES

PRACTICAL REFERENCES

METHODOLOGY

INTERVIEWS

Gather insights into the meanings of patterns from people who know them and practitioners of this art.

READINGS

Building a theoretical framework linking patterns, textiles, and computation.

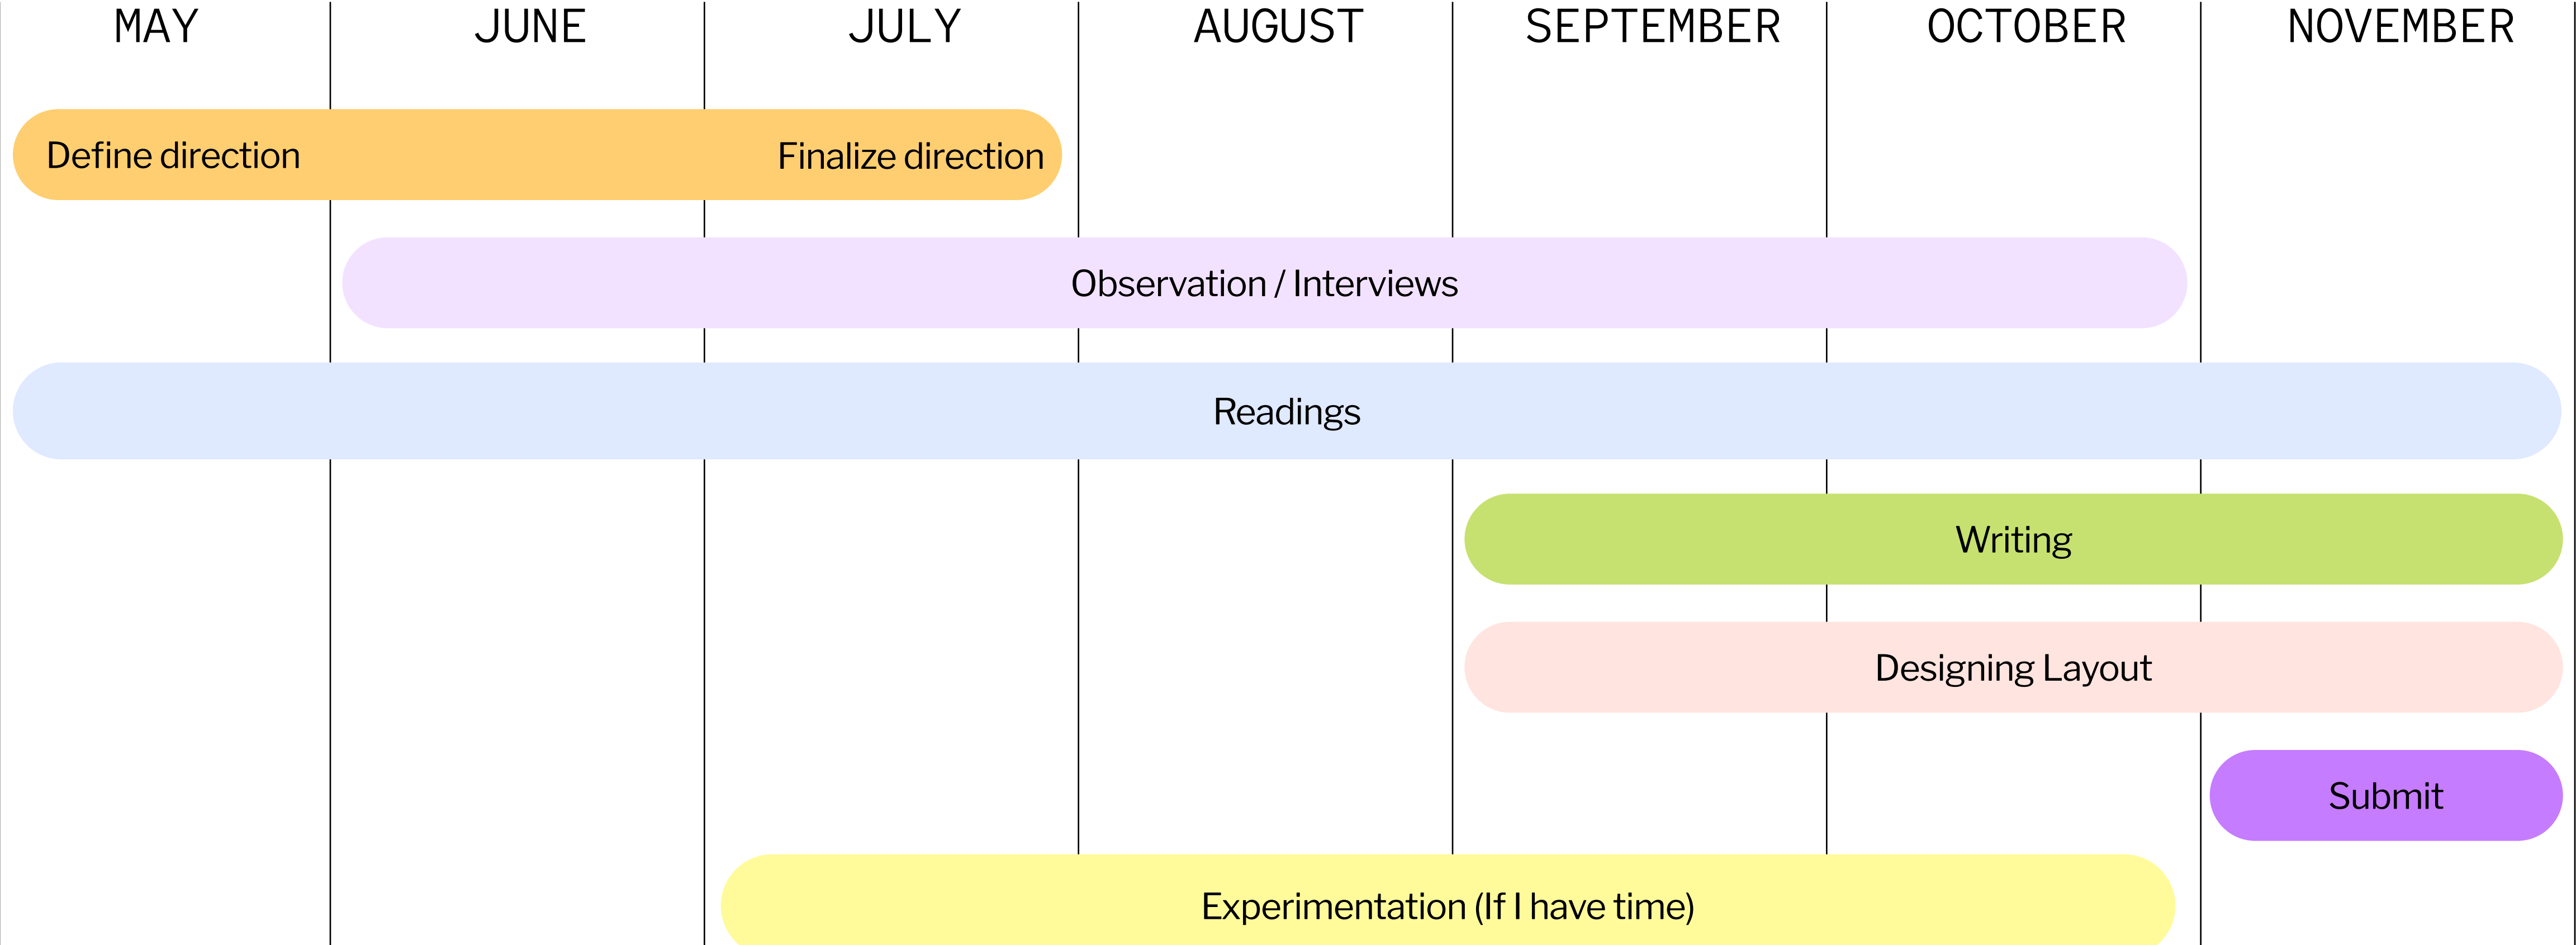

OBSERVATION

Analyze patterns from my own fabrics and other sources, and identify their structures.

EXPERIMENTATION

Test the translation of design elements into code, typography, and interaction.

SCHEDULE

GOAL

This research treats West African fabric patterns as living systems of meaning, and explores how design can carry their voice into contemporary digital media without flattening what they say.

Thanks for your attention!!
